Ayush verma

-----DESCRIPTION-----

Duis aute irure dolor in reprehenderit in voluptate velit  
esse cillum dolore eu fugiat nulla pariatur. Excepteur sint  
occaecat cupidatat non proident, sunt in culpa qui officia  
deserunt mollit anim id est laborum.

-----

## TIPS

-----

1. Treat an online course like a “real” course.

-----

2. Hold yourself accountable

-----

Practice time management.

-----

4. Create a regular study space and stay organized.

-----

5. Eliminate distractions.

-----

# SOME TIPS FOR FULL STACK DEVELOPER!!

---

## 1 :Server, Network, and Hosting Environment.

a: This involves understanding what can break and why, taking no resource for granted.

b: Appropriate use of the file system, cloud storage, network resources, and an understanding of data redundancy and availability is necessary.

c: How does the application scale given the hardware constraints?

---

## 2 :Data Modeling

a: If the data model is flawed, the business logic and higher layers start to need strange (ugly) code to compensate for corner cases the data model doesn't cover.

b: Full stack developers know how to create a reasonably normalized relational model, complete with foreign keys, indexes, views, lookup tables, etc.

---

## 3 :API layer / Action Layer / MVC

a: How the outside world operates against the business logic and data model.

b: Frameworks at this level should be used heavily.

c: Full stack developers have the ability to write clear,

consistent, simple to use interfaces. The heights to which some APIs are convoluted repel me.

---

#### 4 :User Interface

a: Full stack developers: i) understand how to create a readable layout, or (ii) acknowledge they need help from artists and graphic designers. Either way, implementing a good visual design is key.

b: Can include mastery of HTML5 / CSS.

---

5: Understanding what the customer and the business need.

a: Now we are blurring into the line of architect, but that is too much of a hands off role.

b: Full stack developers have a grasp of what is going on in the field when the customer uses the software. They also have a grasp of the business.
